ABOUT TASC

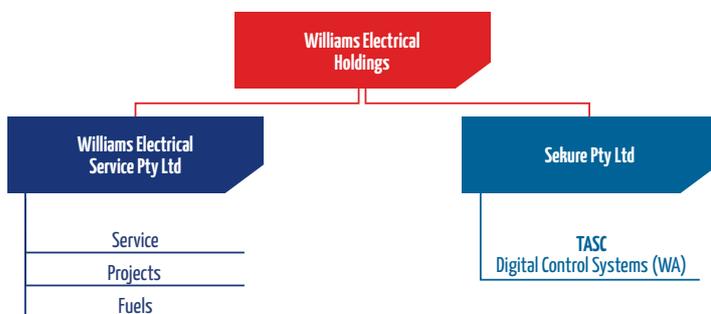

OUR HISTORY

In 1997, in response to merging analog technologies to digital within the security industry, TASC was formed. Today, TASC is trusted by global multinationals, the public sector and smaller private sector clients across multiple divisions to manage their security needs. Since our foundation, we have strived to remain at the forefront of the security industry by providing the latest technologies with our superior customer-focused approach.

COMPANY STRUCTURE

From inception until March 2013, TASC was a division of Williams Electrical Service (WES). In March 2013 TASC became an independent company and currently sits under the umbrella of Williams Electrical Holdings - as a trading name of Sekure Pty Ltd.

TASC benefits from the full support of and access to WEH, including financial backing, access to personnel and the development of management systems and processes, including HSE, quality and risk management practices.

OUR PEOPLE

Ethics, Safety, Training and Customer Focus are the focal principles instilled in all our people. Our commitment to high-quality training allows our technicians to establish a comprehensive security plan for your business.

All TASC staff are easily identifiable by their company uniforms and security licenses. All technicians have received extensive professional development, training (including in customer service) and have all insurances and licenses required to provide consultation and installation of advanced digital security systems. Our technical support, installation and service technicians ensure that quality is maintained across the board, and nothing compromises the services provided to our clients.

OUR DIFFERENCE

The TASC difference lies in our unwavering commitment to customer service and support, and our ability to stay at the forefront of change with the latest technologies. All our work is compliant with Australian standards, in particular AS2201. We are a licensed monitoring bureau and can provide all levels of intruder detection and monitoring services.

TASC is renowned for its commitment to customer care both for our multinational clients and our smaller local businesses. You can rest assured that your business is in great hands, as TASC takes responsibility for all parts of the project, from specification and consultation to installation and maintenance.

OUR SERVICES

WORKING WITH US

FLAGSHIP PROJECTS

ELIZABETH QUAY BUS STATION PTA/PROGRAMMED

TASC undertook the design, supply, installation and commissioning of a GPS Repeater System in the new Elizabeth Quay Bus Station which was completed whilst the Bus Station was fully operational.

WHEATSTONE LNG CHEVRON/NOKIA

This project was conducted in a challenging environment and took three years to complete. Works included the design, supply, installation and commissioning of a Lenel Access Control System and the full integration with all other security services on the plant.

FREMANTLE PORTS FREMANTLE PORTS AUTHORITY

This project required extensive stakeholder meetings as it was conducted in an operational Port. The design, supply, installation and commissioning of a Rajant Wireless Network System and Vehicle Detection Trailers was completed with no incidents.

CORPORATE SUSTAINABILITY

As a successful West Australian owned and operated business, we recognise that corporate sustainability is an important and essential part of achieving longevity in business. Our commitment to a sustainable future is underpinned by principles that shape our approach to people and safety, business performance and innovation, and encouraging an open and engaging environment.

SAFETY

The safety culture at TASC is one of leadership and commitment to continual improvement. We make sure our people and their work environments are as safe as possible.

We have full access to management systems and processes, which were developed to allow adaptation and adjustment for continual improvement.

Our team are trained and follow OHS guidelines, including toolbox meetings, how to work with SWMS and JSA documents and how to apply them on their projects/ jobs. All employees undertake job scope and site-related inductions as required, dependent on the project.

INNOVATION

We endeavour to remain at the forefront of the security industry through continuous research of the latest innovations, to ensure we provide the latest technologies on offer from around the globe.

Our experience, over two decades, allows us to predict industry trends and act quickly to ensure our clients always know they have access to the best products on the market.
